

Hydraulic Technician:  
Beaumont, TX

The hiring manager is looking for two senior level candidates. They need to have experience with proportionally controlled, directional controlled valves or with variable displacement piston pumps. The experience he is looking for with these pumps and/or valves is tear down, rebuild, and test. Those are his must-haves.

The next items are preferences, but not must-haves: be able to read schematics, and have tube bending experience.

Certificates and degrees are also not must-haves.

It is important that candidates do not have experience operating hydraulics only, but also rebuilding it.

Some of the companies that candidates may have worked for to gain that knowledge are: Parker, RexRoth, Eaton, Caterpillar, and John Deere.

Pay is \$24.00 to 32.00
